Practical Task 1: Upload and Retrieve Files with Azure Blob Storage

Use Azure Blob Storage for storing and retrieving files.

Requirements:

1. Create a new storage account in Azure.
2. Set up a Blob container named "my-container" with public access.
3. Upload a sample text file to the Blob container using the Azure portal.
4. Download the uploaded file to verify successful retrieval.
5. Use Azure Storage Explorer to manage and view blobs in your container.

New container
Name *
newcontainer
Anonymous access level
Container (anonymous read access for containers and blobs)
All container and blob data can be read by anonymous request. Clients can enumerate blobs within the container by anonymous request, but cannot enumerate containers within the storage account.

Network connectivity
You can connect to your storage account either publicly, via public IP addresses or service endpoints, or privately, using a private endpoint.
Network access *
Enable public access from all networks
Enable public access from selected virtual networks and IP addresses
Disable public access and use private access
Enabling public access from all networks might make this resource available publicly. Unless public access is required, we recommend using a more restricted access type. Learn more
Private endpoint
Create a private endpoint to allow a private connection to this resource. Additional private endpoint connections can be created within the storage account or private link center.
Add private endpoint

Create a storage account
Security
Configure security settings that impact your storage account.
Require secure transfer for REST API operations
Allow enabling anonymous access on individual containers
Enable storage account key access
Default to Microsoft Entra authorization in the Azure portal
Minimum TLS version
Version 1.2
Permitted scope for copy operations (preview)
From any storage account
Hierarchical Namespace
Hierarchical namespace, complemented by Data Lake Storage Gen2 endpoint, enables file and directory semantics, accelerates big data analytics workloads, and enables access control lists (ACLs) Learn more
Enable hierarchical namespace
Access protocols
