Practical Task 4: Manage Storage Accounts using Azure CLI and PowerShell

Requirements:

- Use Azure CLI to create a new storage account named mystoragecli in the East US region.
- Use Azure PowerShell to create a new storage account named mystorageps in the West Europe region.
- List all storage accounts in the subscription using both CLI and PowerShell.
- Retrieve the connection string for the mystoragecli storage account using Azure CLI.
- Retrieve the connection string for the mystorageps storage account using Azure PowerShell.
- Delete both storage accounts using the respective tools.
